# Bliss Splints

## FUNCTIONAL AND ATTRACTIVE ALTERNATIVES FOR NEURO/ORTHO PATIENTS

Arthritis, tendinitis, Ehlers-Danlos syndrome and other diagnoses can make hands and fingers swollen, stiff, and painful. Custom-made, sterling silver Bliss Splints are precisely designed for each patient to restore hand function. Unlike plastic splints that are bulky and unattractive, these splints, beautifully handcrafted

in our clinic by Occupational Therapist, Donna VanHelene, provide support, stabilization, and protection to the fingers while retraining the muscles of the hand to work optimally. Bliss' unique combination of science and artistry helps minimize pain so our patients can enjoy greater independence and function.

**For more information please call [617.952.6100](tel:617.952.6100)**
